

Roxana well Rh 15-4

Raw ditch samples

80786, 10-20' Sand, quartz, mostly sub-rounded, VF to med.  
tr. muscovite, some cloudy pink grains possibly  
K-spar. No evidence of any type of fossils.

80787 20-30' Sand, quartz mostly subrounded & rounded.

VF to med, some VC sand + small gravel

tr. mica - muscovite + altered green mica, benthonic  
foraminifera & shell fragments, traces of a but looks  
like glauconite. Greenish-blue brassy minerals.

Traces of organic woody looking fragments.

80788 30-40' Sand, quartz, subrounded to rounded, VF-med,  
dirty, shell fragments, traces of woody looking  
fragments, benthonic foraminifera, more shell  
fragments than above no mica evident,

80789 40-50' Sand, quartz, VF-M + SILT, shell fragments very abundant  
dirty, small gas trochods,

80790 - 50-60' Shell hash, small gas trochods, quartz sand, m-vc.  
s.H.

Roxana well Rh 15-4

1 Paw ditch samples

80791- 60-63' Wood

80792- Sand, quartz F-VC, subangular to subrounded with  
some rounded, silty. Some chert fragments in matrix -  
probably from above.  
No bugs or mica.

Rh15-4

Driller's Log

By The Well Driller

<u>Depth</u>	<u>Lithology</u>
0-10	Sand, medium to coarse, white
