

WELL CODE BW-T-2-71

ELEVATION 8 - wrong in database - probably ~~BA~~ 30

T.D. 185

note: samples essentially have uniform lithology to bottom of hole. top sample (0-10) contains Eocene, Paleocene + cretaceous forms. so biostrat. is not possible here. probably samples were collected from cuttings pile after hole was drilled. Logs are probably ok to use for correlation.
