TOTAL DEPTH: 300'

GEOLOGIC LOG

- 0-10 Weathered Gneiss — dark-brownish to black and cream; very-coarse-grained, (larger than size of cuttings, which range from 1. to 10 mm); biotite, muscovite, alkali-feldspar, quartz, plagioclase, apatite, minor sphene, zircon, hornblende, magnetite, and iron oxides.
- 10-20 Gneiss — cream and dark-brown, coarse-grained, albite, porphyroblasts, biotite, oligoclase, epidote, muscovite, minor sphene, zircon, quartz, magnetite.
- 20-30 Gneiss — cream with minor dark-brown; coarse-grained; hornblende, biotite, albite, porphyroblasts, muscovite, epidote, oligoclase, quartz, zircon, sphene, apatite, and magnetite.
- 30-40 As above — more hornblende, less biotite.
- 40-50 As above — less albite, more biotite.
- 50-60 As above — more albite.
- 60-70 Gneiss — black with white and cream; 0.2 mm to 7 mm (cuttings size); hornblende, biotite, oligoclase, quartz, epidote, muscovite, minor zircon, apatite, sphene, magnetite; porphyroblasts of untwinned oligoclase with acicular inclusions.
- 70-80 As above — slightly finer-grained size.
- 80-90 Hornblende Gneiss — black with white, slightly iron stained; coarse-grained; hornblende, plagioclase, epidote, minor biotite, quartz, magnetite traces, sphene, pyroxene, apatite, zircon, vein quartz.
- 90-100 Gneiss — black and white; 1.0 to 10. mm grain size; hornblende, biotite, oligoclase, minor apatite, sphene, pyrite, magnetite, iron oxides.
- 100-110 As above — less hornblende, more biotite and iron oxides.
- 110-120 Gneiss — medium-bluish-gray; 0.3 to 10 mm; hornblende, biotite, oligoclase, epidote, minor sphene, apatite, pyrite, trace iron oxide.
- 120-130 Feldspar Gneiss — pale-blue-gray, 0.5 mm to 7 mm (cuttings size); oligoclase, alkali feldspar; minor biotite, quartz, magnetite, epidote, muscovite, sphene, apatite, pyrite.

OWNER: C. E. Fulcher

#1333

- 130-140 Gneiss — dark-bluish-gray; 0.5 average grain size; hornblende, oligoclase, biotite, epidote, quartz, apatite; minor sphene, alkali feldspar and magnetite.
- 140-150 As above — with pyrite and more oligoclase.
- 150-160 As above — less oligoclase.
- 160-170 As above — minor iron oxides.
- 170-180 Gneiss — medium-bluish-gray; 0.1 to 4 mm; albite, oligoclase, hornblende, biotite; minor sphene, garnet, apatite, calcite, epidote, and microcline.
- 180-190 As above — no microcline.
- 190-200 Gneiss — medium-dark-gray; 0.1 to 7.0 mm; oligoclase, albite, biotite, hornblende, quartz, apatite, and magnetite.
- 200-210 Gneiss — white and black; 0.1 to size of cuttings (7.0 mm); oligoclase, microcline, hornblende, biotite, epidote, apatite, muscovite, quartz, calcite, and sphene.
- 220 Gneiss — black and white; 1.0 mm to size of cuttings (2.0 mm); hornblende, biotite, oligoclase, sphene, minor apatite, calcite, and tourmaline.
- 230 As above — more biotite.
- 240 Gneiss — white with black; 0.2 to 3.0 mm; oligoclase, albite, potash feldspar, biotite, hornblende; minor epidote, quartz, muscovite, apatite, tourmaline, calcite, sphene.
- 250 As above — less feldspar, more apatite, muscovite, and sphene.
- 260 As above — more feldspar, less apatite.
- 270 Gneiss — black and white; 0.3 to cuttings size, (3.0 mm); hornblende, biotite, oligoclase, apatite; minor sphene, epidote.
- 280 As above.
- 290 Gneiss — white and black; 0.2 to cuttings size, (2.0 mm); hornblende, biotite, oligoclase, alkali feldspar, apatite, epidote; minor calcite, sphene, tourmaline.
- 300 As above — no alkali feldspar, more sphene.
