#### GEOLOGIC LOG

0-10	No samp	e.
0-10	INO Ballip.	

- 10-20 Limestone dark gray, almost black, fine grained, abundant white calcite veins, minor ferruginous quartz and clay, minor quartz pebbles.
- 20-30 As above less calcite.
- 30-40 As above slight increase of calcite, minor clay layers.
- 40-50 Limestone dark gray almost black, fine grained, with abundant white vein calcite, minor black claystone, minor brown clay nodules.
- 50-60 As above with very minor gray clay.
- 60-70 As above no clays.
- 70-80 As above with one piece of quartz from a silicified zone that has since been leached.
- 80-90 Limestone dark gray almost black, fine grained with abundant white vein calcite, very minor brown shaly limestone.
- 90-100 As above slightly lighter, no shaly limestone, very minor brown silicious fragments.
- 100-110 Limestone dark gray, slightly bluish, fine grained, minor calcite veins, very minor silty limestone.
- 110-120 As above slight increase of vein calcite.
- 120-130 Limestone dark gray almost black, fine grained, thin bedded, minor white vein calcite, minor quartz aggregates.
- 130-140 As above less vein calcite, no quartz.
- 140-150 Limestone dark gray, fine grained, minor vein calcite, very minor quartz aggregates and ferruginous clay concretions.

OWNER:	Sterrett Water Company, Inc. (Continued)	#1200	
	Meadowview Subdivision #2		

150-160	Limestone - dark gray,	almost black,	fine grained.
160-170	As above - less calcite.
