GEOLOGIC LOG

Depth in feet

0-15	Saprolitic Greenstone	= red-brown; strong iron-oxide staining; clay, fragments of greenstone, vein quartz and trace of pyrite
15-25	Schist	= grayish-tan and brown; microcrystalline to cryptocrystalline, poorly foliated; feldspar, quartz, chlorite, actinolite, biotite, sericite, pyrite, and vein quartz; some iron-oxide staining
25-35	"	gray, no iron-oxide staining
35-50	"	"
50-60	"	light-gray; slickensides, sheared; more vein quartz, quartz and feldspar, less chlorite, biotite, sericite and actinolite; no iron-oxide staining
60-75	Gneissic Schist	= gray; microcrystalline to cryptocrystalline; foliated; quartz, feldspar, biotite, chlorite; minor sericite, pyrite, actinolite and vein quartz
75-90	"	
90-105	"	more biotite and actinolite
105-120	"	"
120-135	"	more vein quartz and actinolite; a few fragments of pink feldspar
135-150	"	
150-165	"	
165-180	Gneissic Schist	= gray; macrocrystalline to microcrystalline, phyllitic; quartz, actinolite, feldspar, biotite, chlorite, pyrite and vein quartz; minor blue quartz and pink feldspar

OWNER: J. Lynn Cornwell, Inc., Well #3

#1747

180-195	Gneissic Schist - gray; macrocrystalline to microcrystalline, phyllitic; quartz, actinolite, feldspar, biotite, chlorite, pyrite and vein quartz; minor blue quartz and pink feldspar
195-210	"
210-225	" more quartz and feldspar, less chlorite; lesser degree of schistosity
225-240	" "
240-255	Gneiss - gray; fine-grained, some fragments slightly schistose, foliated; quartz, feldspar, amphiboles, biotite, chlorite, pyrite and trace of calcite
255-270	"
270-285	"
285-300	"
300-315	" less amphiboles and biotite
315-330	" " more chlorite
330-345	" " "
345-360	" " "
360-375	" " "
375-385	" " "
