### GEOLOGIC LOG

Depth in  
feet

#### COLUMBIA GROUP (0-20')

- 0-10 Sand — brownish-orange, slightly clayey; medium-grained, well-sorted, subangular; moderately feldspathic
- 10-20 Sand — bright orange-brown, slightly- to moderately clayey; fine- to coarse-grained, rather poorly-sorted, angular to rounded; slightly to moderately feldspathic; magnetite and weathered glauconite common in fine fraction; traces of muscovite and garnet, and a few rock fragments

#### YORKTOWN FORMATION (20-60')

- 20-30 Sand and Shell — tan, moderately-clayey; 35% fine- to coarse abraded pelecypod, echinoid, and bryozoan shell debris, and a few fragments of calcitic sandstone; 65% medium-grained, moderately-sorted, subangular- to well-rounded quartz sand; trace of glauconite; foraminifers common, but not abundant
- 30-40 Sand — gray, slightly- to moderately clayey, 25% coarse pelecypod (-scaphopod-gastropod) shell material; fine- to medium-grained, well-sorted, angular- to subangular sand; clear and pale-green quartz, with minor glauconite; a few echinoid spines, foraminifers, and fragments of coral
- 40-50 "
- 50-60 " with 3-5% dark-green glauconite, and a few bone fragments

#### CALVERT FORMATION (60-190')

- 60-70 Sand — greenish-gray, slightly clayey, a few shell fragments; fine-grained, fairly well-sorted, angular to subangular; clear and pale-green quartz, with minor glauconite

OWNER:	Williamsburg West Corporation	#2192
70-80	Sand — grayish-green, slightly clayey; fine-grained, well-sorted, angular; minor glauconite, hornblende, biotite, and relatively-coarse muscovite	
80-90	Sand — gray, slightly-clayey; trace of shell; fine-grained, well-sorted, angular; clear and greenish quartz, with minor muscovite, hornblende, and fine-grained glauconite	
90-100	" grayish-green, very-slightly clayey	
100-110	Sand — grayish-green, slightly-clayey, 5-10% pelecypod shell fragments; fine-grained, very well-sorted, angular to subangular; trace of glauconite; a few echinoid spines	
110-120	" moderately-clayey to clayey; very little shell material	
120-130	" clayey, diatomaceous, a few large shell fragments	
130-140	Clay — greenish-gray, sandy, diatomaceous, a few large shell fragments; sand fraction is fine- to very-fine grained, very well-sorted, angular; traces of glauconite and muscovite	
140-150	" very sandy, somewhat less diatomaceous	
150-160	Clay — gray, compact, slightly silty and sandy; sand is fine- to very-fine grained, well-sorted, angular micaceous, very-slightly glauconitic; a few plant fragments	
160-170	Sand and Clay — interlaminated light-gray, sand-free clay and greenish-gray, moderately-clayey sand; sand fraction is fine, well-sorted, angular; small foraminifers common, but not abundant	
170-180	Clay — brownish-gray, very-slightly sandy, 5% decomposed pelecypod shell fragments; sand is fine, angular, quartzose; abundant nodular pyrite; foraminifers moderately abundant ( <u>Nonion</u> most common)	

OWNER: Williamsburg West Corporation

#2192

180-190 Clay — greenish-gray, slightly sandy, a few shell fragments; sand is fine, angular, quartzose; phosphatic nodules and bone fragments common; foraminifers moderately abundant (Nonion, Balivina, Uvigerina dominant)

CHICKAHOMINY FORMATION (190-220')

190-200 Sand — abundant matrix of drab, greenish-gray clay, a few shell fragments; medium-grained, moderately-sorted, subangular; clear quartz, with 5% fragmental phosphorite; a few foraminifers, including Siphogenerina

200-210 " medium- to coarse-grained, moderately-sorted, subrounded; trace of phosphorite

210-220 Sand — greenish-gray, moderately-clayey, trace of shell material, a few fragments of coarse-grained calcitic sandstone; medium- to coarse-grained, fairly well-sorted, subangular to rounded; clear quartz, with minor fragmental phosphorite

NANJEMOY FORMATION (220-290')

220-230 Limestone — light-gray, equi-granular, fossiliferous, slightly pyritic

230-240 Sand and Limestone — 40% medium-grained sand and 60% yellowish, sandy limestone; sand fraction consists of reddish-brown allochthonous glauconite and subordinate subrounded- to well-rounded stained quartz

240-250 Limestone — light-gray, equi-granular; slightly fossiliferous and glauconitic

250-260 Sand — brown, speckled; 60% medium- to coarse-grained, partially-decomposed glauconite, and 40% coarse-grained, rounded, stained quartz

260-270 "

270-280 "

280-290 "
