Generalized Geologic Map for Land-Use Planning: Pendleton County, Kentucky

Richard A. Smath and Daniel I. Carey

Planning Guidance by Rock Unit Type

This map is intended to assist in land-use planning by indicating rock units that may place limitations on the types and locations of land uses. The map includes a legend that provides a scale for interpreting the rock units and their potential limitations. The map is based on geological data and is intended to be used in conjunction with other planning and regulatory documents.

Legend:

1. Shale
2. Sandstone
3. Coal
4. Limestone
5. Granite

Notes:
- Shale: Suitable for most land uses except where overlying or underlying layers may pose significant problems.
- Sandstone: Suitable for most land uses except where overlying or underlying layers may pose significant problems.
- Coal: Suitable for most land uses except where overlying or underlying layers may pose significant problems.
- Limestone: Suitable for most land uses except where overlying or underlying layers may pose significant problems.
- Granite: Suitable for most land uses except where overlying or underlying layers may pose significant problems.
